

Envirotis Holding is a leader in the field of environmental risk management and protection in Hungary. Our mission is to support our communities in their commitment to sustainability by providing comprehensive solutions to address the complexity of environmental requirements.

Based on the principle that environmental health is integral to economic well-being, our group specializes in a wide range of services, including risk assessment and remediation solutions. Our expert team is available to guide our clients through every step of the way to achieve their environmental goals.

OUR ACTIVITIES:

- · waste management,
- · remediation,
- environmental engineering,
- project management,
- · technical implementation,
- water treatment and wastewater treatment planning and construction,
- reclamation and landscape restoration,
- mitigation and remediation of environmental damage caused by industrial activities and mining

APPLIED TECHNOLOGIES:

- Bioremediation remediation and recovery
- Chemical and physical soil stabilization
- Biological and thermal soil treatment
- Groundwater washing
- Open aquifer phase separation groundwater treatment
- Thermodesorption disposal
- · Thermal disposal
- Galvanic sludge treatment
- Vacuum distillation oil processing
- Biodegradation

At Envirotis, we believe that by taking a proactive approach, we can prevent future costly consequences in all areas of environmental protection. We work with companies from different industries, enabling them to implement better environmental strategies that are in line with their corporate sustainability goals. With a commitment to excellence, transparency and customer satisfaction, Envirotis Ltd. is committed to making a positive impact on the planet. Together we can build a more sustainable future, conserve our natural resources and protect the communities we serve.

LET US SHARE A COMMON GOAL: A CLEANER AND SAFER WORLD FOR FUTURE GENERATIONS.

BUILDING A VALUE CHAIN - WASTE BATTERY RECYCLING

Envirotis Plc. focuses on sustainable solutions for the management of today's key battery waste. With the proliferation of electric vehicles, the demand for lithium batteries and the amount of production battery waste generated have increased significantly, creating an urgent need for the development of an efficient domestic hazardous waste management strategy.

Our main goal is to create a recycling value chain for the processing of scrap batteries generated during production, which will offer a solution to serve all domestic battery factories. We are working to create recycling facilities to recover valuable materials from used batteries, such as lithium, nickel and cobalt, which can be reused to make new batteries. Our technology recycles incoming battery waste with an efficiency of over 95%, so that battery cells can be made from the raw materials at the same rate. Our goals are in line with the requirements of the directive published by the European Union in 2023.

Our company adheres to strict environmental regulations and standards to minimize the ecological impact of battery waste. We focus on recycling processes to ensure proper handling and processing of hazardous materials.

By increasing the efficiency of recycling processes, we aim to increase the recovery rate of valuable materials and reduce the environmental footprint and thus the costs associated with battery waste management.

Our vision includes contributing to a more sustainable future through innovations that reduce dependence on new materials and reduce hazardous emissions associated with battery production. Our group stands out in the field of battery waste management through a combination of innovative technologies, community engagement and a strong commitment to environmental stewardship, making significant strides towards reducing the ecological footprint of battery waste.
