HUNGAROPEC Industrial Waste Management Ltd.

## HUNGAROPEC INDUSTRIAL WASTE MANAGEMENT LTD.

Hungaropac Zrt., specialized in waste management and disposal, offers environmental solutions to market players that are fully compatible with their economic activities, development policies and the preservation of resources.

The company deals with the final disposal by landfilling of hazardous industrial waste that cannot be recovered or incinerated economically or at all using currently available technologies. Incoming waste can be disposed of only after preliminary analytical examination, visual inspection, radioactivity measurement and repeated laboratory control, and only if accompanied by the appropriate documentation.

## ENVIROTRADE TRADE AND SERVICE LTD.

EnviroTrade is responsible for the procurement, logistics and capacity optimization of waste for the group's waste management activities. Provides a nationwide, complex waste trading service to customers throughout the country. Provides a safe, economical and environmentally sound solution for the maximum possible recovery, disposal and logistics of the industrial waste received. Through its member companies and partnerships, the Holding is able to provide the widest range of waste management technologies in the country.

## ENVISIO ENVIRONMENTAL PROTECTION LTD.

Envio is a highly professional subsidiary specializing in environmental protection. It has carried out several successful environmental remediation projects as a general contractor, including the construction and operation of one of the largest hazardous waste pre-treatment plants in the country.

Envio is currently the business development base of the group. The main activity of our colleagues here is to promote sustainable circular economy, identifying, localizing and implementing the most up-to-date and competitive innovative technologies in the Group's subsidiaries.

Other tasks include liaising with foreign companies, participating in exhibitions and conferences, and representing the Group's interests at a high level.

Envio is responsible for the permitting processes of the holding company and plays a prominent role as an expert in the preparation of the regulatory legislation on hazardous waste management in Hungary.

## FÜZFŐI WASTE INCINERATION LTD.

Responsible for the disposal of hazardous waste by incineration. The company deals with industrial solid and liquid wastes for which incineration is the most efficient way of disposal from a technical or environmental point of view.

## VÉRTES ENVIRONMENT MANAGEMENT LTD.

Deals with the biological treatment of waste, producing a product suitable for the reclamation of brownfield sites. It also produces a construction product from inert waste and a fluxing oil product from waste oils, which it sells as a feedstock for bitumen production. The company also carries out remediation activities using the practical experience gained from its operations.

## AQUATIS TECHNOLOGY LTD.

Aquatis is dedicated to the implementation of water treatment and wastewater treatment technologies. We have significant experience in industrial and residential water management, integrated design and construction of water engineering systems and remediation projects, and related technical consultancy services.

Its activities include the design, construction and operation of industrial water and wastewater treatment systems, as well as the design and construction of municipal drinking water treatment systems. Over the past decade, the company has provided design, equipment supply and construction services to the pharmaceutical, food, energy, semiconductor and battery industries in Hungary. In addition, they have gained many years of experience in the design and construction of domestic drinking water quality improvement projects and complex surface water management projects.

## GALLAVIT ENVIRONMENTAL PROTECTION LTD.

Gallavit Environment Ltd. handles hazardous and non-hazardous waste based on the current single environmental permit and its own operating permit. Its recovery technologies focus on specific waste streams of production waste. The technologies include the recovery of acidic and alkaline solutions, rinsing and washing liquids, solids containing heavy metals, sludges and liquids. The technologies used recover the useful content of the waste, thus contributing to its further recovery in the context of economic cycles and sustainability.

Waste that has undergone recovery processes meets the end-of-waste criteria, so that it can be replaced by other materials as products, after losing its waste status.

## TERRA-LOG DEEP CONSTRUCTION LTD.

Its main profile is the remediation of environmental damage caused by industrial activities, mining, mainly under public responsibility, and the implementation of remediation and reclamation projects after abandoned industrial and mining activities. It contributes to the response to environmental disasters caused by industrial activities, mitigation and remediation of environmental damage.

As a qualified defense contractor, it is responsible for assessing environmental damage to defense installations, planning the necessary interventions and carrying out the remedial actions ordered. It also provides professional support in the management of environmental incidents in priority military facilities and the professional management of the implementation of the necessary immediate remedial interventions.

During remediation, waste is extracted, transported and further treated and disposed of (on-site) in accordance with official regulations, primarily with the cooperation of the companies in the group.

It has references for in-situ remediation of contaminated groundwater and undertakes full after-care of remediated areas, including the installation and operation of monitoring systems.

He has been involved in the implementation of significant waste management system developments in Zala, Vas, Veszprém and Szabolcs-Szatmár counties, gaining experience and references as a general contractor in the implementation of infrastructure and modern equipment for separate waste collection, transport and pre-treatment systems.

## WASTEVITAL TRANS TRANSPORTER LTD.

A company specializing in waste transport and excavation work, with one of the most complex waste transport licenses in Hungary. It has not only the specialized machinery but also the personnel to carry out the transport and related material handling and civil engineering tasks, in particular excavation work.

## TATAI ENVIRONMENTAL PROTECTION LTD.

Its main activity is the production of reclamation topsoil using hazardous and non-hazardous industrial waste and by-products. This overburden is used to remediate landscape damage caused by industrial activity.
